*“As long as there is no cure,  
there is no room for complacency.”*

*“Clinical trials provide hope.”*

Every day, cancer patients throughout the region benefit from our unwavering commitment to research and promise of hope.

*“Knowledge is power!”*

A clinical trial should be considered at the moment of diagnosis and not as a last resort. This increases a patient's treatment options. A patient can always receive standard of care but there is a window of opportunity to enroll in a clinical trial.

- Clinical trial patients are among the first to benefit from new therapies.
- Clinical trials are carefully regulated studies which meet or exceed the current standard of care.
- New investigational drugs are typically available only within a clinical trial and are provided free of charge.

*“We are making a difference not only for our patients, but for thousands of people who will benefit from today's trials when they become tomorrow's treatments.”*

Ingalls' research team includes Investigators who are physicians credentialed in cancer research, professional Registered Nurses certified in research and oncology, a Regulatory Specialist, a Contract/Budget Specialist, a Lab Technician and Data Managers. This outstanding team is unified in their passion to improve the lives of those diagnosed with cancer, the hunger to make a difference and the compassion to care for each unique human being.

*“Finding a cure for cancer is within our grasp.”*

The Cancer Research Center of Ingalls is a National Cancer Institute designated program that participates in clinical trials to provide our community with the newest drugs and most advanced cancer treatments.

- Affiliated with Northwestern University, University of Chicago, University of Illinois, National Cancer Institute Cooperative Groups and National and International Pharmaceutical Sponsors
- 10-year history of conducting outstanding cancer research
- Satellite research sites in Tinley Park, IL, Munster, IN and Hobart, IN
- Participates in all phases of clinical research, with over 50 active clinical trials across multiple disease sites and stages
